Interactive Objects has appointed Thomas Wager as CEO

Thomas Wager, an experienced professional with a solid management background in the IT industry, has been appointed new CEO of Interactive Objects, the renowned Germany-based legacy modernization solution provider. He will work with Interactive Objects to further expand the market leadership as solution provider for software modernization projects.

Freiburg, October 26, 2006. Thomas Wager was appointed new CEO of Interactive Objects, the Germany-based expert for legacy modernization solutions, as of October 1, 2006.

Thomas (42) is a veteran in the IT industry who has spent the bigger part of his professional career in managing and growing solution-delivery organizations. Most prominent are his achievements with BROKAT, where he helped to kick-start the company into a 1.400 employee and 2 billion total assets venture, and abaXX, where he managed to attain profitability and significant revenues during a most challenging phase of optimization. He also counseled large software projects as an independent strategy and management consultant. Thomas previously held the position of Executive Vice President and was responsible for Professional Services at Interactive Objects.

"Interactive Objects has a tremendous potential," said Thomas Wager. With its model centric legacy modernization approach, the company is among the technology leaders in the area of legacy modernization solutions. Upcoming new solution offerings will further secure Interactive Objects' leading position in the modernization arena. Both, engineering and professional services will be further amplified. "These two areas provide powerful synergies," Thomas Wager continued. Our developers have a strong technology and methodology background from building the award-winning MDA development tool ArcStyler®. Our experienced consultants are expert practitioners whose feedback from real-world projects greatly contributes to our efforts to secure the company position as one of the leading legacy modernization solution providers. In order to achieve these objectives, Interactive Objects will increase its marketing and sales activities and expand its partnerships on an international scale.

About Interactive Objects

Interactive Objects delivers excellence in Application Engineering and Legacy Modernization. Our 16 year history, numerous successful customer projects and many industry awards are proof of our commitment to our customers and earned the firm the reputation of a European leader in the area of component technologies and distributed systems.
